

Isabella Li

Seattle, WA | ili4@uw.edu | 425-624-0393 | <https://github.com/IzzyL234>

Passionate about computer science and computer engineering. I enjoy building projects that combine hardware and software.

Education

University of Washington, Seattle

Sept. 2026 - Present

B.S. in Computer Engineering offered by the Paul G. Allen School in the College of Engineering.

Redmond High School, Redmond

Sept. 2022 – June 2026

High School Diploma. SAT: 1580. National Merit Scholar Finalist

Technical Skills and Projects:

Programming & Design: Python, SQL, Stata, Qiskit, GitHub; machine learning, CNNs, clustering, data visualization, clinical time-series analysis, Fusion 360, Wix, Figma.

Hardware & Tools: Raspberry Pi, ESP32-CAM, KiCad, CircuitPython, serial communication, PCB design, soldering, and 3D printing.

Creativity, Subtext, and Shared Context in AI Communication

July 2026

Independent Research Project

Used Python and the Gemini API to build a controlled experiment investigating whether language models can generate and interpret creative, indirect clues whose meaning depends on shared context. Investigated whether models can move beyond literal descriptions to make original connections and adapt what they say to what a particular listener knows.

Hack Club Hardware Hackathon

ShenZhen, China

Hackclub Website: <https://hackclub.com/>

July 2026

- Attended fully funded hardware hackathon in Shenzhen after completing 60+ hours of independent hardware projects and technical preparation
- Designed and built [HackCam](#) in 3 days, collaborating with teammates on system design and component sourcing while gaining hands-on experience in rapid hardware prototyping and integration.

AnemoDx: A Low-Cost Non-Invasive System for Accessible Hemoglobin Screening Using Computer Vision and Machine Learning

July 2025

Developed anemia detection hybrid CNN model to accurately detect hemoglobin levels non-invasively, through photographs of fingernails. Built software and fingernail scanning hardware, full end-to-end development. Won Congressional App Challenge. Sponsored by STEAMoji and STEMSCI, local STEM organizations.

A Comparative Analysis of Quantum and Classical Support Vector Machines on Complex Data for Customer Churn Prediction

July 2025

- Conducted a three-person research project at the UCSB Summer Research Academies
- Built and evaluated quantum support vector machine (QSVM) models for customer churn classification using Qiskit
- Produced complete ten page research paper, presented at research symposium

MIT Beaver Works Microelectronics Course and Admitted to Program **June 2025**

Completed the Microelectronics, Python, and Github courses on the MIT BWSI online learning platform. Applied to and was accepted to the Microelectronics program but did not attend due to a conflict with the UCSB SRA program.

Relevant Experience

ASIA VITAL COMPONENTS

Redmond, WA

Global thermal management & data center hardware solutions provider | TWSE: 3017

Intern, AWS team

July 2026-Sept 2026

- Supported AWS Trainium and Annapurna infrastructure projects across liquid cooling, thermal, and server hardware
- Coordinated with AWS and Taiwan-based engineers weekly on technical requirements, design changes, and project updates
- Analyzed component sourcing, capacity, lead times, and production schedules to assess supply-chain risks
- Developed internal tools to streamline project tracking, visualize manufacturing timelines, and support cross-functional decisions

UW TACOMA CENTER FOR DATA SCIENCE

Tacoma, WA

Student Researcher

Jan 2026-Present

- Analyze large-scale ICU patient datasets for early sepsis prediction research
- Develop and validate time-series pipelines for modeling organ dysfunction progression in critically ill patients
- Apply Python, Stata, K-means clustering, and statistical methods to stratify patient trajectories and evaluate mortality and discharge outcomes

ART OF PROBLEM SOLVING

Redmond, WA

Teaching Assistant

July 2024-Present

I work with students at the Art of Problem Solving, teaching Language Arts and Mathematics. I have experience working in rigorous academic settings, both inside and outside of the classroom. I am able to communicate effectively with students and am efficient and proactive.

Leadership & Awards

The Harvard Undergraduate Research Journal Research Competition

Nov 2026

US and North America Champion, Global Finalist; Semifinals (Original Research and Research Proposal).

Founder of the Society of Women Engineers SWENext Club at Redmond High

2023– 2026

Founded the first SWENext club in Lake Washington School District, securing 1K+ in funding and leading mentorship, speaker, outreach, and nonprofit collaborations to expand STEM access for underrepresented students. Impact of 2000+ students. Website: [Home](#) | [Swenextrhs](#)

Co-Host of Youth Talk Program at Chinese Radio Seattle (AM 1150, HD-3 FM 98.9)

May 2023-2026

Website: https://chineseradioseattle.com/saturday/youth_talk/

Share high school experiences with immigrant audiences, teach situational English, and interview minority leaders.
